

## PROTECTIVE BARRIER CREAM

InviGlove™ is a uniquely formulated protective barrier cream that forms an invisible film over the skin. It is a first level of defense against contaminants such as:

- ◆ Solvents & Fuels - Petrol, Diesel, Turpentine, Xylene, Styrene, etc.
- ◆ Lubricants - Motor Oil & Grease
- ◆ Paints, Pigments and Colors
- ◆ Resins - Polyester, Epoxy, Polyurethane, Acrylics, Alkyds, Silicones, Phenolics, etc.
- ◆ Dirt, Dust, Mud, Calk, Fiberglass, Fertilizer, Chemical Powders, etc.
- ◆ Pathogens and microbes found in Public Buses, Trains, Malls etc.

# 10 FAQ'S to Save Your Skin

1) Does InviGlove™ come off on my clothes or food? No, InviGlove™ binds with the outer layer of skin cells and becomes part of the outer layer of skin itself. Once absorbed, it comes off naturally as dead skin cells get sloughed off. Dead skin cells are constantly exfoliating on a microscopic level; InviGlove™ does not interfere with this natural process.

2) Does InviGlove™ come off if I wash my hands? InviGlove™ is a water soluble product and easily washes off. In fact, InviGlove was made to protect against the drying effects of repeated hand washings or high exposure to water and detergents. Doctors, dentists, nurses and other people who need to wash their hands repeatedly are protected.

3) How often do I apply InviGlove™? InviGlove™ lasts for up to 4 hours or more. After about 4 hours enough skin cells have sloughed off to cause the barrier to break down; for continued protection just reapply. Wash and dry your hands before reapplying.

4) Does my skin breathe and perspire with InviGlove™? The Outer layer of skin, if functioning properly acts a one way barrier, preventing irritants from coming in but still allowing it to breathe. Irritants, harsh soaps, antibacterial agents, etc. strip the natural oils and moisture from the skin. As a result the skin becomes much more susceptible to even more irritants penetrating it and stripping out even more moisture and oils.

InviGlove™ aids the outer layer of skin to perform its intended function. It does this by restoring its natural balance, turning the outer layer of skin into what could be described as an invisible pair of gloves.

InviGlove™ assists damaged skin in preventing moisture robbing irritants from penetrating and helps reduce moisture loss but does not prevent the skin from breathing. In fact it improves it because it helps keep the skin pores from being clogged with outside irritants that are often too complex to be eliminated naturally.

5) Can I use InviGlove™ to protect against very harmful chemicals? If the manufacturer's label on a product states that glove use is required, then you must utilize proper safety protection procedures.

6) Does InviGlove™ contain antibacterial

agents and sun block? No. InviGlove™ is formulated to protect the skin from irritants. Anti-bacterial agents can be irritating to some people with sensitive skin. Health Care Professionals are required to scrub with anti-bacterial soaps, so InviGlove™ can protect against the irritating or drying effects of these soaps. InviGlove™ does not protect against radiation or cuts.

7) I have to wear heavy gloves in my work, and my hands get dry from wearing gloves. Will InviGlove™ help? Yes. Apply InviGlove™ and let it dry. InviGlove™ will protect your hands from chemically treated or fibrous gloves and moisture irritation.

8) Can I apply InviGlove™ to my face or other parts of my skin? No. InviGlove™ is formulated specially for protection of Hands, Arms, Legs and feet. Avoid contact with eyes.

9) Is InviGlove™ safe if I put my hands in my mouth? Yes. InviGlove™ is non-toxic, and completely safe if ingested in the microscopically small amounts that may come off the hands before drying into the outer layer of skin. See the Material Safety Data Sheet. "Ingestion is not toxic; if large quantity is ingested may cause diarrhea."

10) I'm allergic to lanolin, fragrances, dyes and other ingredients put in lotions. Is InviGlove™ safe for me? InviGlove™ contains no known irritating substances since its purpose is to protect against irritation. InviGlove was formulated to be completely hypoallergenic and non-toxic.
